Open-source 3D Robot simulator with web interface helps industries to implement digital twin models.

Switzerland

Published 11.Apr.2023 - 11:52

General information

Title

Open-source 3D Robot simulator with web interface helps industries to implement digital twin models.

Short summary

A Swiss company is developing a realistic robot simulator which can be used to simulate various digital twin scenarios involving mobile robots, robotics arms, drones, autonomous vehicles, industrial processes, etc. Sensors and actuators can be modeled, such as cameras, lidars, laser range-finder, etc. Robots are controlled by intelligent programs processing sensor data with AI algorithms. The software is fully open-source, runs on the desktop and features a cloud-based 3D web interface.

Full description

The SME developed the Webots software, an open source and multi-platform desktop application used to simulate robots. It provides a complete development environment to model, program and simulate robots.

It has been designed for a professional use, and it is widely used in industry, education and research. The SME maintains Webots as its main product continuously since 1998. The software was originally developed at EPFL, Lausanne, Switzerland.

Webots can be used to create robot prototypes, develop, test and validate AI and control algorithms, teach robotics to students, etc.

Partner sought

Expected role of the partner

The partner sought should have interest in using a digital twin model of a robotic system in their processes.

Esempio di Brokerage Event

- **Innovat&Match Brokerage Event 2023 - 8 - 9 giugno 2023**
